

L1S

The **Gennius L1S** model is our “wooden pergola” Gennius; perfect for waterproofing an outdoor area with a retractable roof cover that offers the aesthetics of a wooden pergola. The aluminum framework is clad in Scandinavian Spruce, which is available in a light or dark stain. This heavy duty **retractable pergola awning** was specifically designed and engineered to handle inclement rain weather.

Technical details

— Maximum width: 42'8"

— Maximum projection: 19'8"

CE Tested and certified CE and TUV

The L1S Gennius guide rail profiles are supported by integrated wood-clad aluminum structural rafters and column (post) framework. The maximum (free-spanned!) projection of this Gennius model is 19'8" with a maximum width of 42'8". That's over 800 square feet of space covered with one **motorized fabric roof!**

Wind resistance guaranteed up to class 6 in accordance with UNI EN PR 13561. **Integrated rain management** technology captures rainfall and routes it down the sealed fabric slope into the front end gutter and down the front support posts.

The Gennius system has a protective hood covering the fabric when in the retracted position. It is engineered with a special 7-layer aluminum panel that is rain drop quiet and unobtrusive. The waterproof fire-retardant fabric protects from damaging and uncomfortable UV light and heat and keeps the rainwater off of the space it protects.
